Homework Guidelines

1. Submit your problems in the order they are listed.

2. Ensure your name is in the margin at the top of the first page.

3. Staple your work together.

4. Leave at least one-inch margins around the edges of the pages, except possibly at the bottom.

5. Leave a space between problems.

6. Circle your final answer whenever appropriate.

7. Avoid excessive cross-outs and scratch work.

Failure to comply with these guidelines may result in penalty. To ensure that these guidelines are met, I would suggest that you first work out the problems in your own scratchwork (which you won't hand in) and then transfer clean solutions to a final sheet (which you will hand in). In other words, treat your homework submission as a polished final draft.
